Review of Assignment-2 of @xia-yang

Bishwajeet Dey

October 3, 2017

Report Review

- The author could not generate the report since the author neither had the time nor the disk space to run the program.

Figure 1: Report

Code Review

- The author tries to generate k-neighbor scores for all words line by line of a file. This would not lead to correct results since it misses boundary words neighbor scores. The author should think of a better way to generate k neighborhood scores.

- Storing the char score in `Configuration` object could have been avoided.

- Makefile does not copy manifest into the JAR. Not sure how the JAR runs with hadoop.
